

Every scored country -- cutoff 2024-01-01 (OOS window 2024-01-16 to 2024-04-16)

ordered by burden-weighted excess of the production architecture over persistence, worst first; RED title = persistence beats production here. Grey panel = the 13-week window scored; dashed vertical = origin.

transmission intensity

— observed

— P000E LSTM baseline (production arch) — ND DLinear

— NDe + edge padding

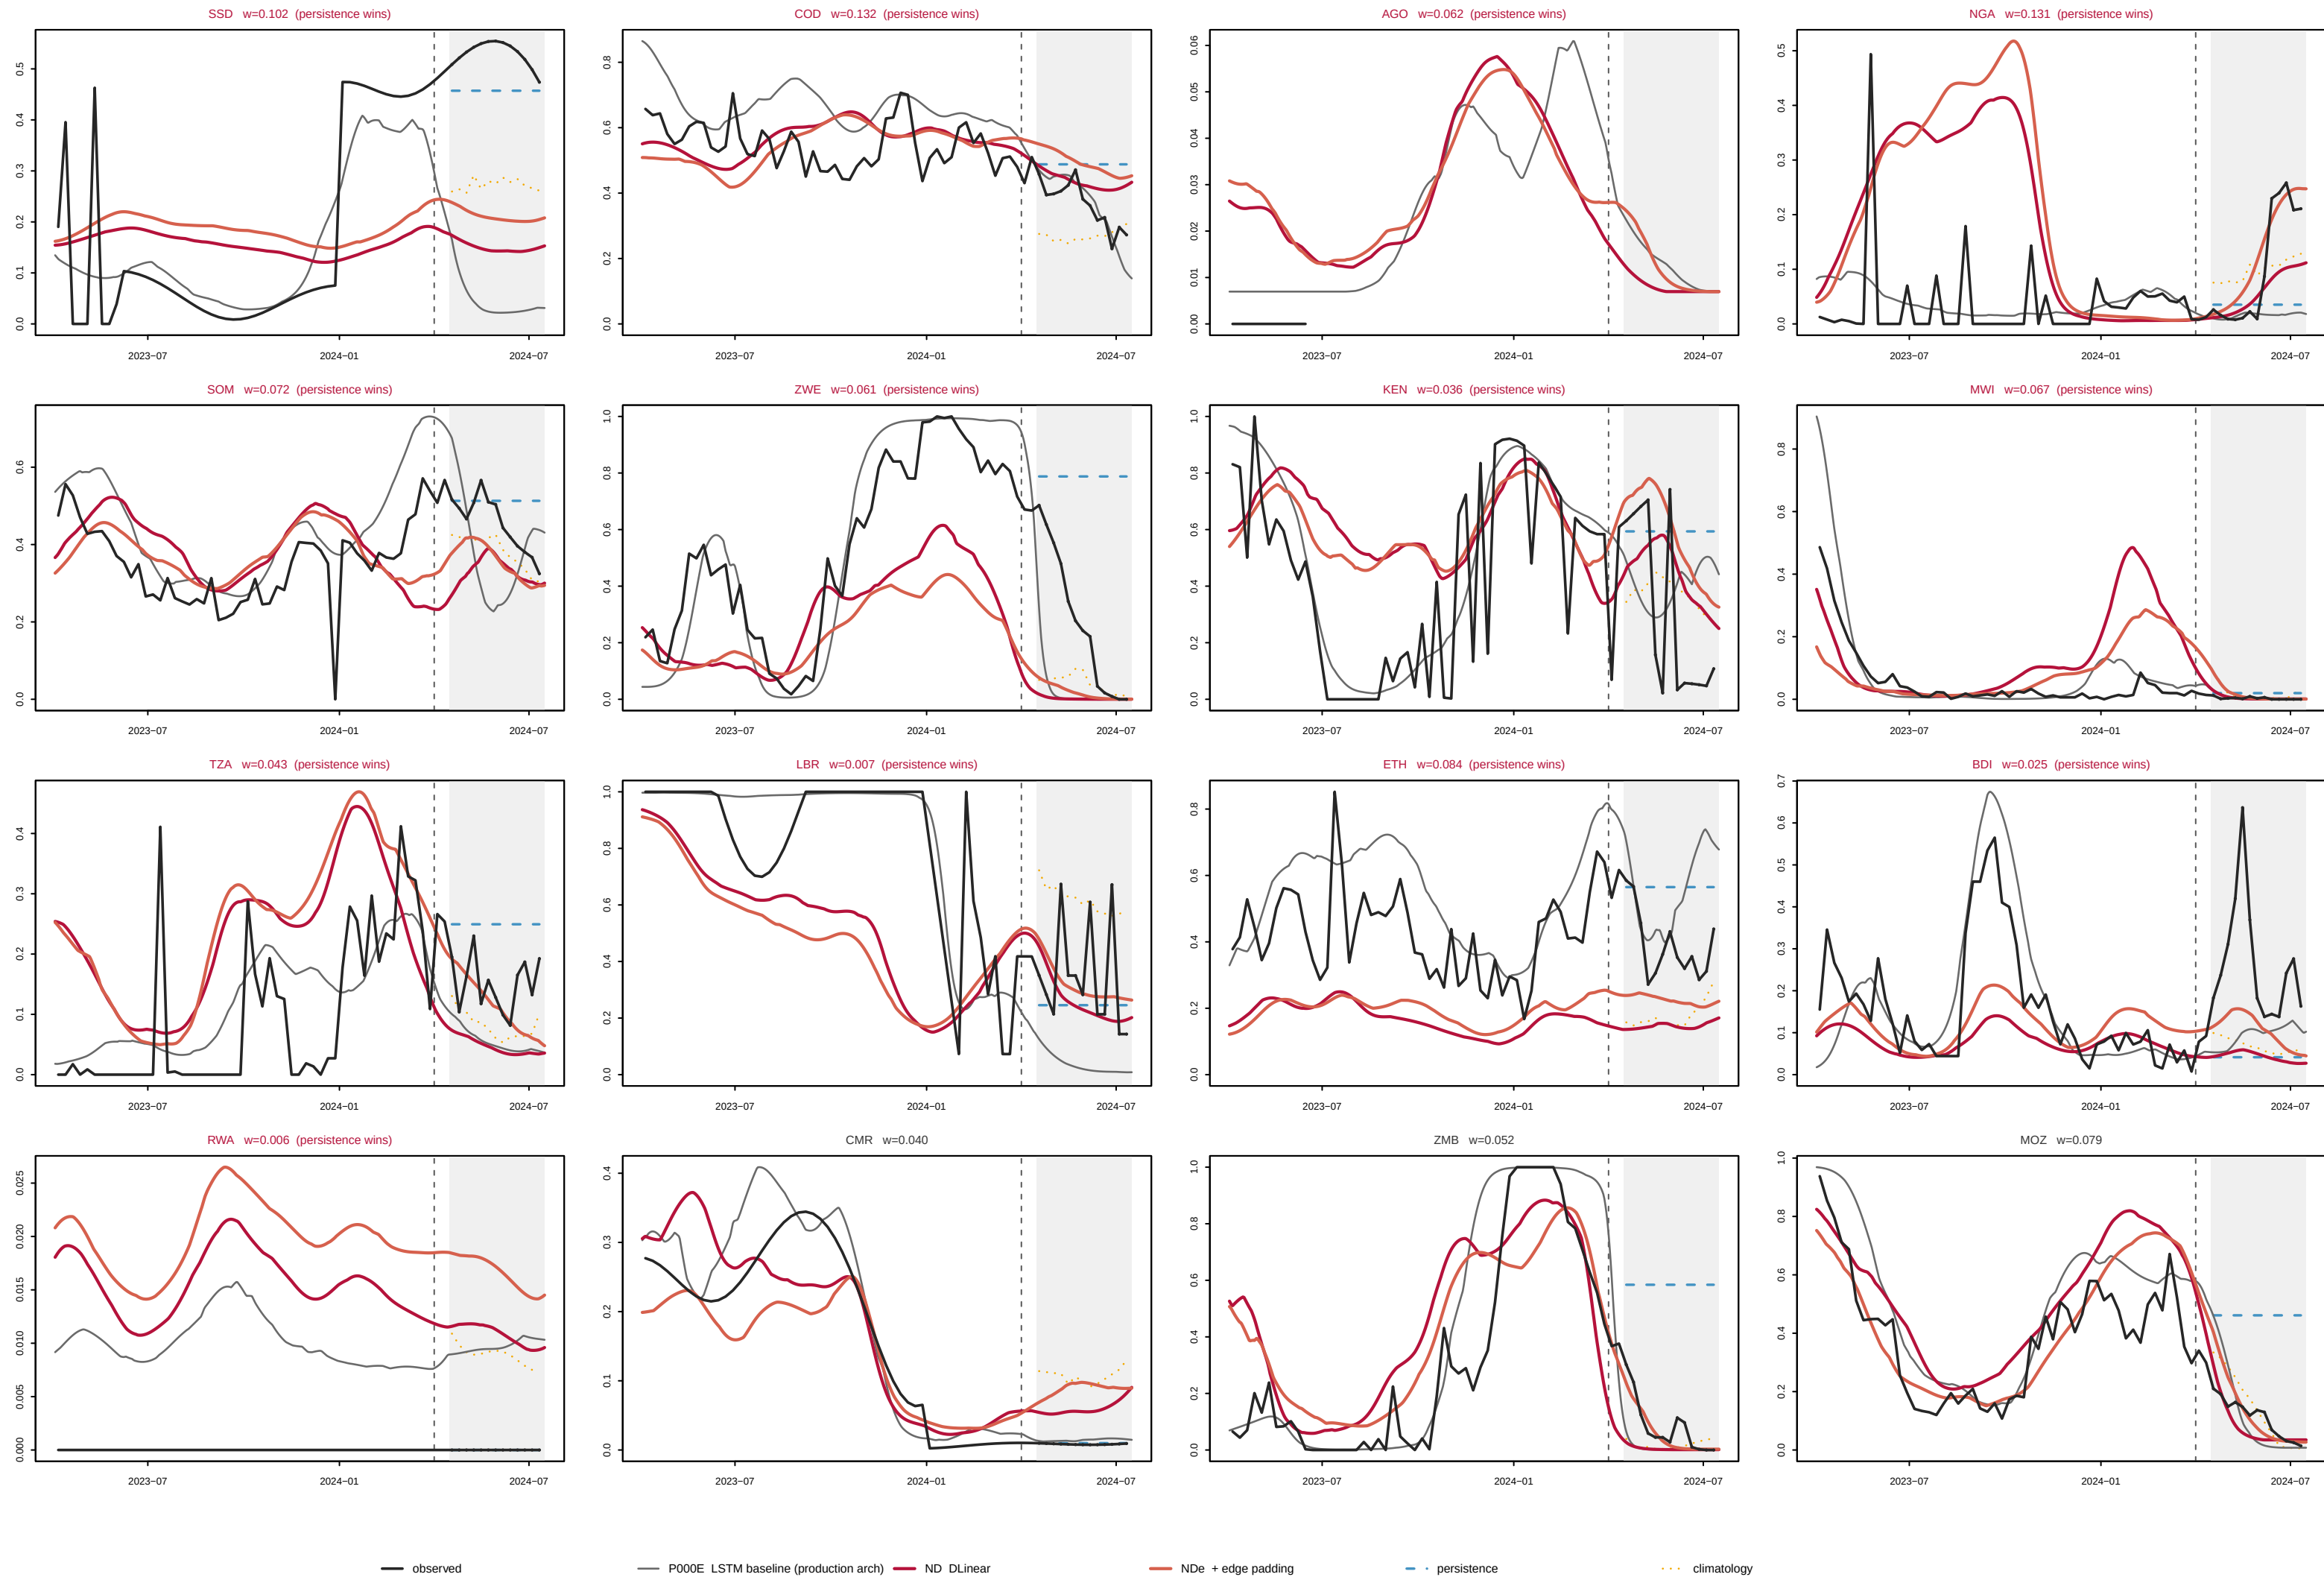

— · persistence

· · climatology

Every scored country -- cutoff 2024-04-01 (OOS window 2024-04-16 to 2024-07-16)

ordered by burden-weighted excess of the production architecture over persistence, worst first; RED title = persistence beats production here. Grey panel = the 13-week window scored; dashed vertical = origin.

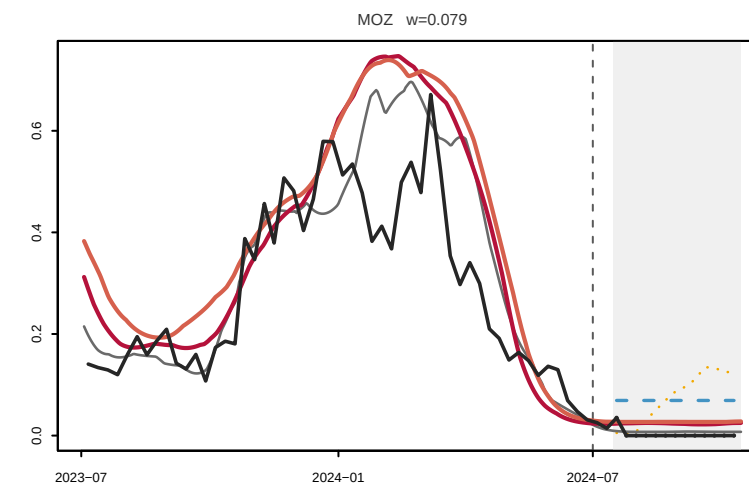

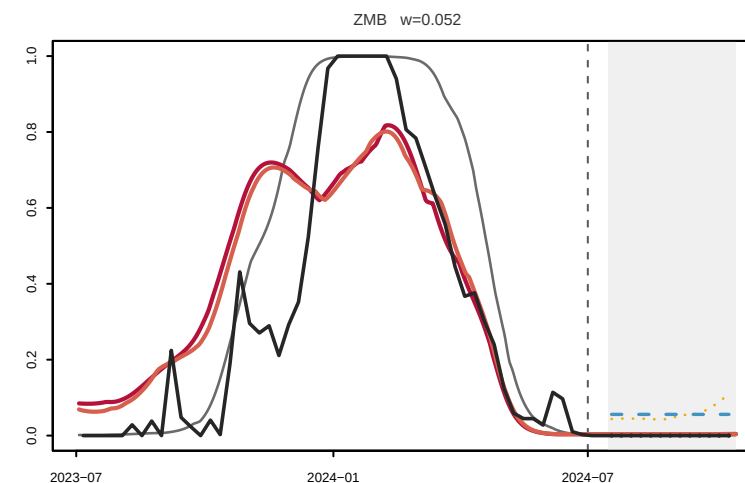

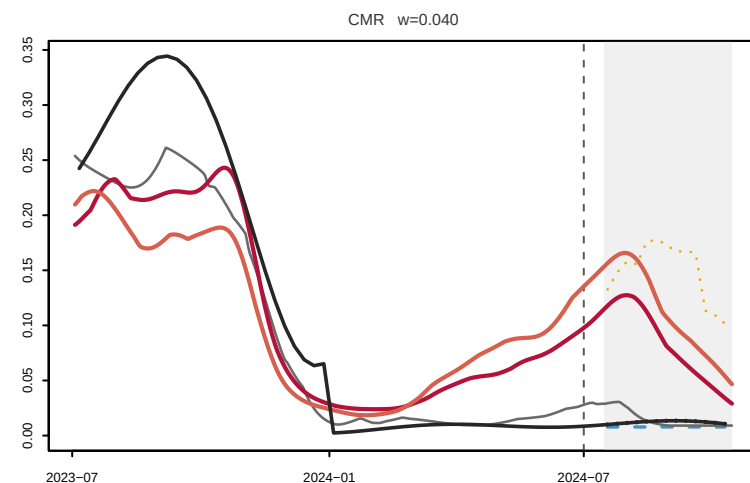

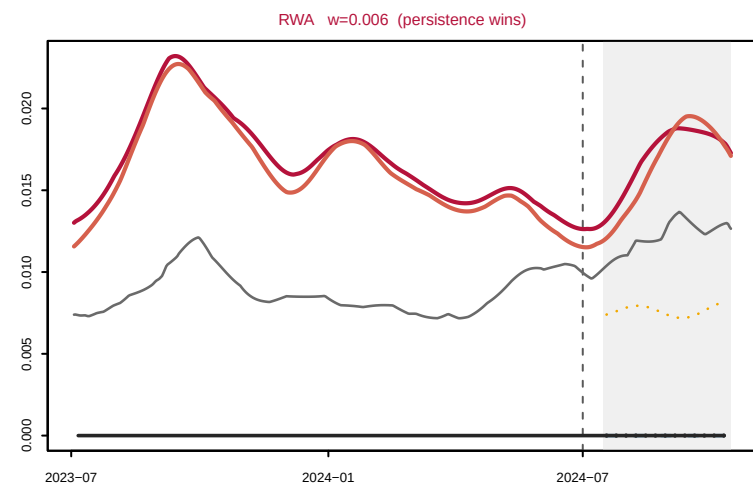

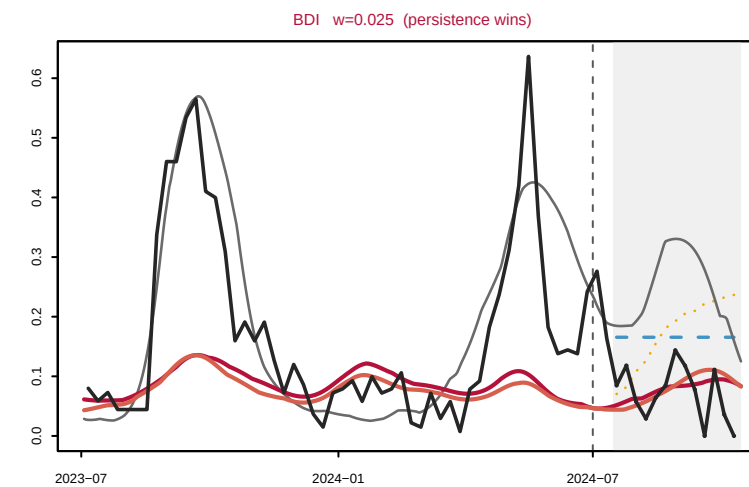

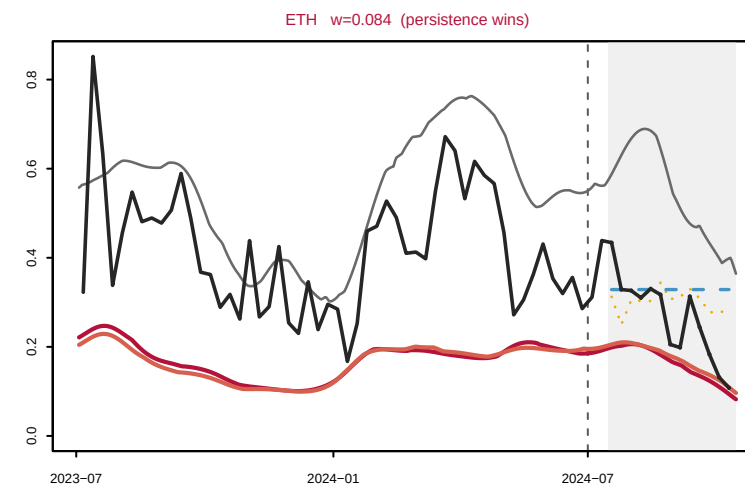

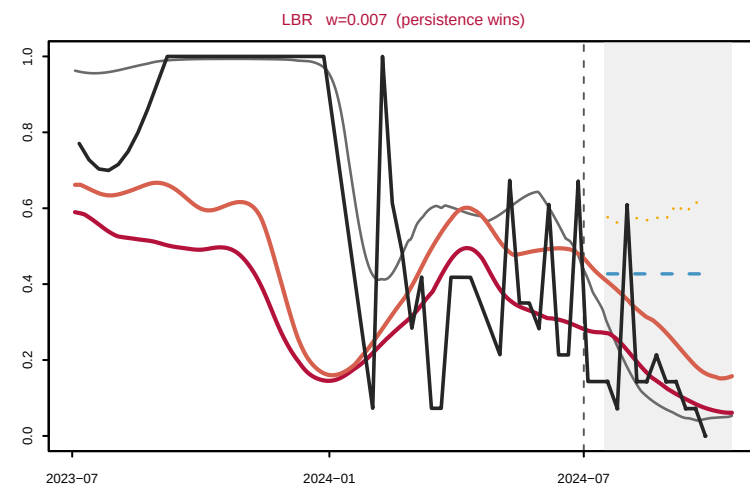

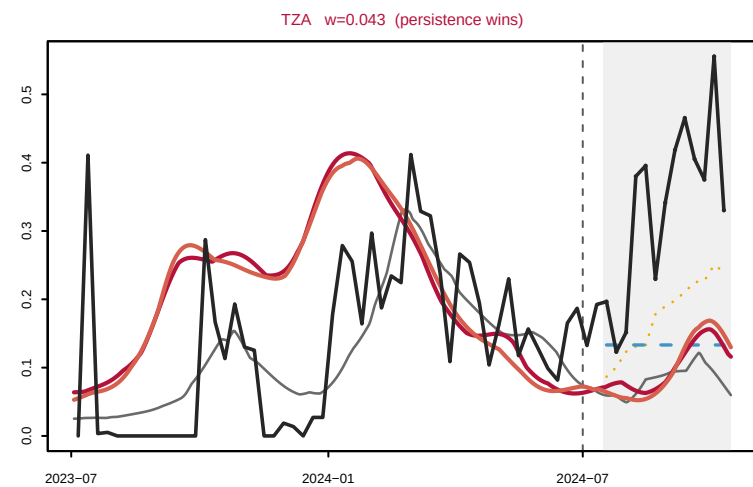

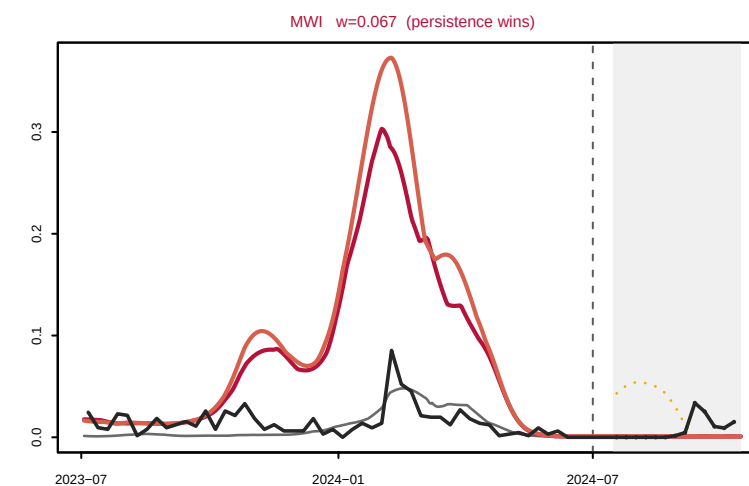

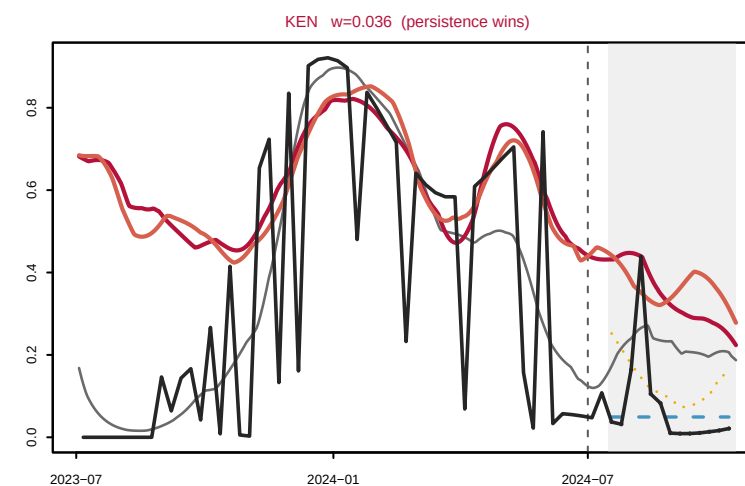

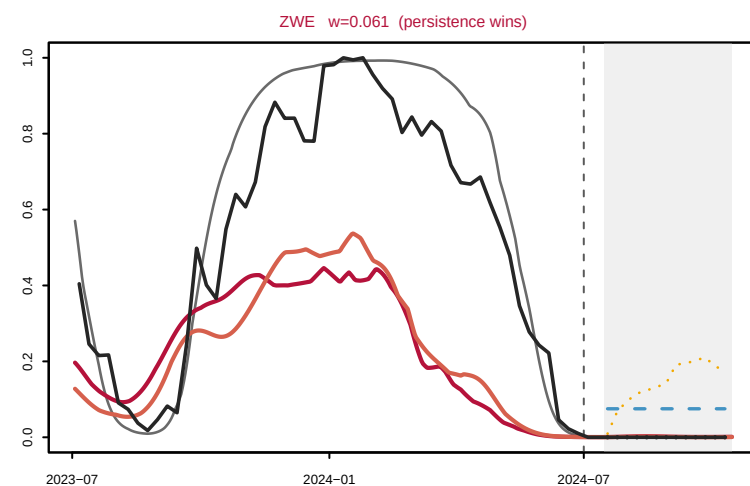

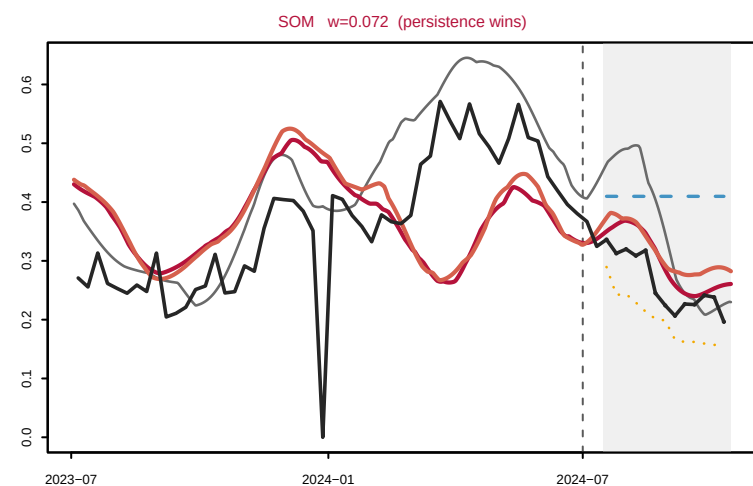

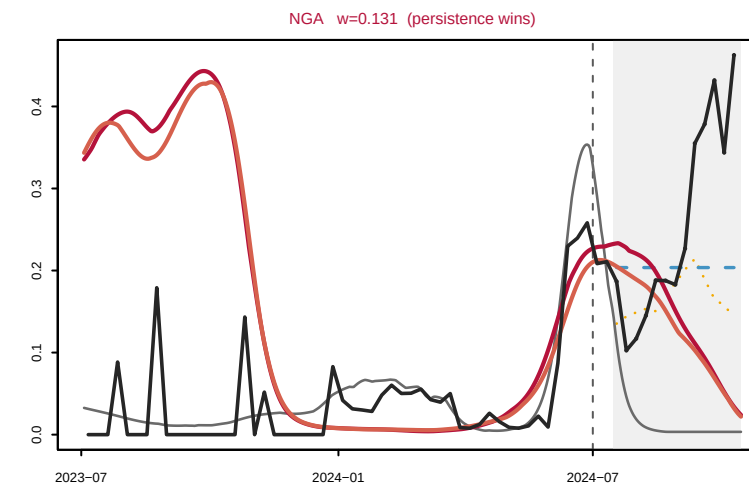

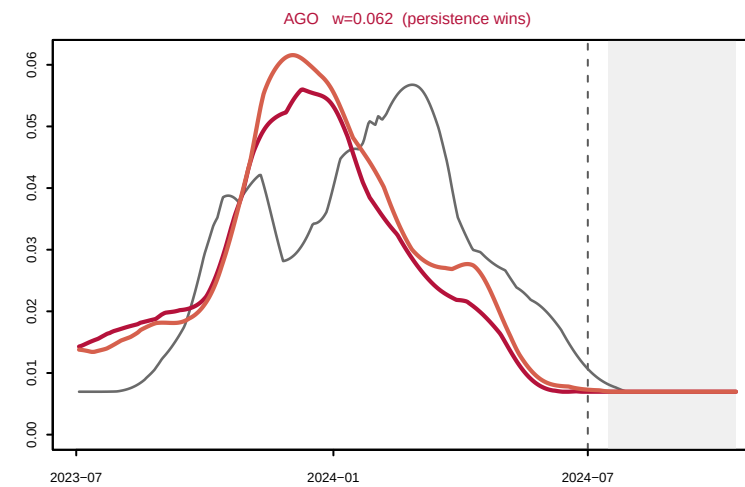

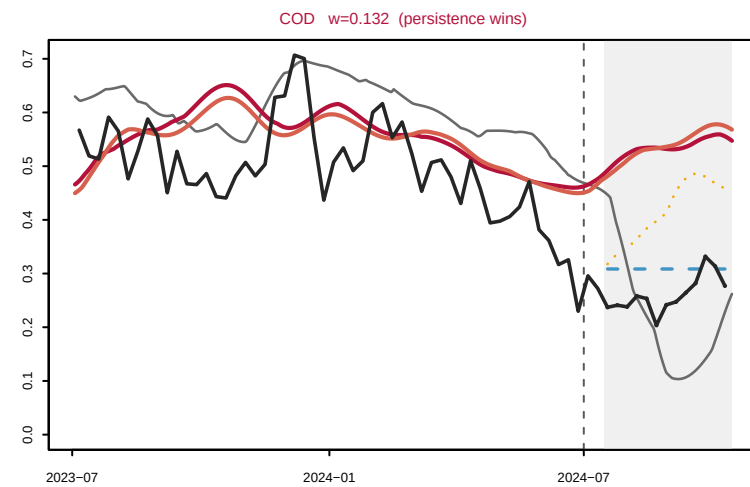

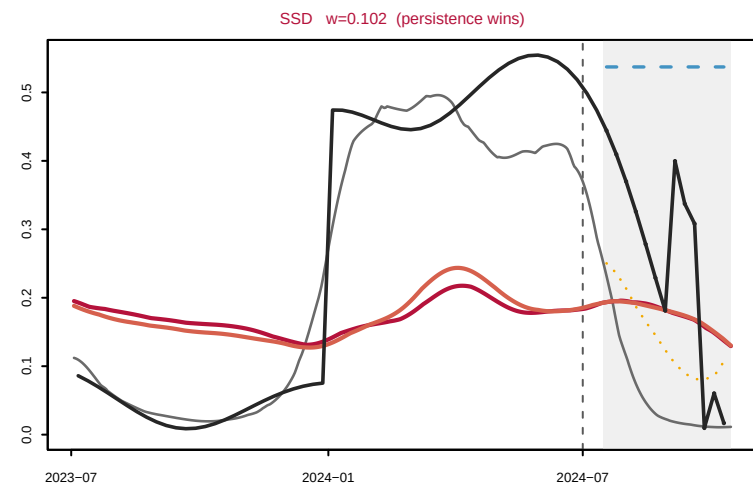

transmission intensity

Every scored country -- cutoff 2024-07-01 (OOS window 2024-07-16 to 2024-10-15)

ordered by burden-weighted excess of the production architecture over persistence, worst first; RED title = persistence beats production here. Grey panel = the 13-week window scored; dashed vertical = origin.
