

Priority set: predictions against in-sample and out-of-sample observed transmission intensity

grey panel = the 13-week OOS window scored; dashed vertical = forecast origin; points = OOS observations. All four arms share the corrected-epoch code, so they are mutually comparable.

transmission intensity

observed
P000E baseline (LSTM) MAE 0.2045
T2 lead = 12 MAE 0.2021
N9 D9b + N8 MAE 0.1983
ND DLinear MAE 0.1772
